A quote...

“Work is work, start by defining it...”

Dave Marshall
Principal Consultant
The Red Oak Group
Why do we offer this information

Because of the Start-Up Challenge

- The clock is ticking – Start-ups are in a constant non-profitable cash burn scenario
- No precedence in knowing what might be important or what has the highest risk
  - Literature Search and Basic Research are the norms
- Low or No Production Volumes to gain understanding of critical requirements
  - Every Build Counts to create collective knowledge base, but infrastructure is often absent and unable to collect critical knowledge
  - Simultaneous Knowledge Accumulation in product and process development, test, and manufacturing
- Inexperienced management team, needing to focus limited resources with strong personalities
- Poor community habits, including inconsistent communication of direction and priority
- Great innovators are not necessarily great organizers and managers
- Investors need concise, quantitative messaging on results and committed work against milestones
What is Three List Management

Based on the assumption that capturing validated work content is independent of resources and time required to complete the work.

The method’s workflow was created to help newly promoted managers get control of their work, priorities, and delivery.

Has helped managers break through organizational barriers that were keeping them from getting promoted.

Allows managers to reduce stress by parking work until resources can be applied.

Think of parking work as putting it in a known safe place.

Gives visibility to work in a structured way, allowing “bucketing” to shape strategies and resource planning.

Enables technical and operational breakthroughs.
Some Definitions

Validated Work
- Work that you, management and investors agree drives short or long term goals toward a desired outcome
- Often companies can quickly agree on validated work, but fail to execute and complete it

Bucketing
- The act of correlating and aligning validated work that share:
  - Similar desired outcomes
  - Similar work flows or processes
  - Similar scope or responsibilities
  - Similar required training or technological expertise
- The act of bucketing often reveals phantom roles that are spread over multiple people, leading to a lack of accountability
- This work is being completed as a “fit it in when you can” part time role
Some Definitions (continued)

Strategic Frameworks
- A place to store (Park) validated work until resources can be applied
- A tool to view work in terms of functions, products, customers, roadmaps, or technologies
- Validated work may or may not be perishable
- Often the first step in resource planning

Tasks versus Projects versus Initiatives
- **Tasks**
  - Longer than couple of days, but small in scope, risk, or impact, but that is still important
- **Projects**
  - Outward Looking Work that requires planning, resources, and coordination that a customer values
- **Initiatives**
  - Inward Looking Work that requires planning, resources, and coordination that improves how the business performs
Post-Its and Piles
Lists, Clip Board, and Notebooks
Typical Modus Operandi

People Change “Systems” Often

- Notebook to Clipboard to Legal Pads to Notebook again

People Lose:

- Business Information and Content
- Scraps of paper
- Customer Requests and Requirements
  - Internal and External

People take notes and actions, but don’t go back to review them, publish them, get buy-in, or complete them

People seem to be in a reactive drama, never turning the corner or escaping

Often there is no traceability or priority after initial content or action capture
Three Lists = Three Loops

**Daily Loop**
- Notes
- Actions
- Messages
- Emails

**Weekly Loop**
- Notes
- Actions
- Messages
- Emails

**Monthly Loop**

- **Daily Lists**: Can be Post-Its, notebook entries, emails, and meeting notes/.actions

- **Tactical To Do List**: Must be a DEDICATED media where unfinished work can be moved (e.g., Gary’s Small Legal Pad; Outlook Tasks and Follow-up Flags; CRM systems)

- **Strategic To Do Lists**: Must be a structured electronic file(s) where longer duration or broader scope can be tracked, bucketed, and bundled (e.g., Ops Project List; Operations’ Strategic Framework) Must be a DEDICATED media where unfinished work can be moved
Discipline is in the Looping

An individual’s work contributes only when:
- It’s completed at an agreed level of quality and thoroughness
- It’s in a framework of business needs and goals
- It’s acceptably on-time as not to disrupt interdependent work

By disciplined looping back to review and capture, you can:
- Track Progress and Mark Completions
- Free up resources in a timely manner for the next thing
- Observe trends in work that didn’t immediately seem related
- Bucket work for correct assignments and resource loading
- Bundle work to create projects and initiatives
- Feel **GOOD** about your completions!
  ...it may be the only good thing that day...
Gary’s Dirty Secret...

✓ Daily I push to complete as many short term captures as possible, minimizing incompletes moving to my Legal Pad
✓ I dutifully loop between my Three Lists, moving items from my Post-It Notes to safe keeping
✓ I use Outlook Email Follow-Ups, Tasks, and Reminders *(Just ask folks that have worked for me...)*
Why does Gary use a Small Legal Pad?

- Takes away my excuses...
  - “...my Laptop was off...”
- Portable
  - Consider buying a leather cover to protect it from its hard life from desk to briefcase, from briefcase to desk
- Visceral
  - Makes you feel good when a page of captured work is completed
  - I developed my own notations and coding
    - Open Box – Not Done
    - Circled Open Box – Visited, not done
    - Checked Box – Should be obvious
      - PUSH – Assigned to team member or moved to longer term list
      - EMAIL/Date – Follow-Ups sent, waiting for answer
  - Write notes in the margin
  - Keep finished page as reference for defense, reviews and history

Hasn’t change in years
Shouldn’t you worry about Priorities and Due Dates?

No

- Not when capturing work
  - Priorities are dictated by the business’ goals
  - Due Dates support priorities
- Folks often freak out and start planning and prioritizing before the work is defined, only to have to do it again and again

Yes

- Once the work is defined
  - **Harvest** validated work from long term storage (Strategic Framework)
  - Assign resources
  - Determine scope, requirements, critical dates, and acceptable outcomes
  - Commit to Completion
  - Track the progress and adjust
  - Communicate changes, planned and unplanned

Note

- If resources aren’t available, **the work won’t be completed**
- If priority is determined to be high, resources will be shifted
Arc Completa “THREE LIST” Work Flow Chart

**Daily** (Post-its and Notebooks)
- Read Morning Email (particularly from Mgt.)
- Answer Urgent Emails immediately
- Flag Emails for later response & assign tasks to Team via Forwarding
- Review Strategic Framework for items that are approaching being due
- Review Project Plans and Lists for items that are approaching being due
- Review Tactical Lists for items that are approaching being due

**Tactical To Do List**
- This list captures issues that should be completed within 2 to 3 days
- This list can be in a notebook, computer program (Outlook), and other means
- This list is looked at many times a day, and items are added and completed constantly
- Items are transferred to Project Plans and Strategic To Do List when they can't be completed
- Assign tasks to Team via Email and note on strategic list
- If the items is not completed in 1-3 days, either it not important, or it should be transferred

**Department Task-Project Initiative List**
- This list captures actions, tasks, and issues that cannot be address within 2-3 days
- This is can be a Department Project and initiative List and it stays on your desk is not carried around
- Items are reviewed and added only a couple of times a week. Hand written editing and updates from staff "one on ones" on printed document are encouraged.
- Transferred from reaction plans, Tactical To Do List, and long term issues and commitments from other projects
- The T-P-I List is updated and refreshed monthly to keep it fresh and to note completed items as marked Green
- Keep old copies for your records (makes performance review simple and fast)

**Event Driven Change of Plan**
- Immediately Address the Issue
- Inform stakeholders of scope, impact, and immediate risks
- RemEDIATE immediate problems, issues, and risks
- STOP Take a Step Back
- Define Problem Statement answering the question "why did this happen?"
- Define Risks (Long Term and Short Term)
- Develop a plan to address risks and permanently solve problems
- Communicate Plan, risks, and likely outcomes to management

**Strategic Framework**
- Constantly look at your areas of responsibilities for risks, opportunities for improvement, and non-conformances
- In Strategic Framework, capture longer term issues that arise
- Attempt to bucket the issues into initiatives and common areas monthly
- Start Projects File and document supporting information to start shaping the “Story”
- Define Problem Statement, desired outcome, and how success will be measured
- Define Project Plan, including resources, justification, and cost estimates
- Determine Short Term and Long Elements and implementation strategy
- Issue regular updates, recapping issues and what has been completed at what level of risk

Does anything line up with other open long-term issues?
Basics - Daily to Weekly

- To start, everyday review your notes, notebook, and Post-Its, and mark completed items
- Move anything not completed by the end of the day to your Weekly Loop List, noting it as open and if there’s a due date
  - Take a quick look to assess if there’s anything that has been or can be checked off the Weekly Loop List
- When reading email, if you can’t response to a request, mark it for follow-up
  - If the email is customer related, at least send an acknowledgement of receipt and that you’ll have an answer by [commitment date]
- Every week, review your weekly loop list:
  - Marking off completions
  - Seeing if trends are developing
  - Line up a couple to be attacked by the end of next week by sending out emails and meeting notices with explanation if needed
  - Review follow-up flags and tasks in Outlook
Basics - Weekly to Monthly

If you’re a manager or supervisor, organizing your team’s work is important to optimizing output

- Use your Weekly List to highlight work that just can’t get done by you
  - You may have to shape it, organize it a bit more, and delegate it as a Task
- At times, indicators pop up as work, only to be symptoms of larger requirements or needs
  - Use the Weekly List to capture such work, noting it may be a component of something larger like a project or initiative in the making, but not fully sorted out
- If enough of the work has aligned and realized itself, capture it as a project or initiative in a Department Task, Project and Initiative List
  - If the resources are available assign it to a lead for execution and completion
  - If it can’t be resourced in a month, consider moving it to a Framework Document, noting it as “On Hold”
What is an “Event Driven Change of Plan”

- This is a fancy way of saying what happens everyday
  - Something broke without warning
  - A critical resource took unplanned personal time off
  - A customer needs immediate attention
  - Weather conditions forced a shut down

- As managers you have to decide how to immediately contain, inform stakeholders, mitigate risks, and redirect resources to handle the occurrence
  - We have to ask ourselves: Is this an ad hoc event, or something systematic?
  - Regardless, plans and commitments will shift and change, usually taking up your or another resource’s time

- The art of management is how quickly normal activities can be reestablished, changes communicated, and event considered from an ongoing operational basis or corrective action
  - When the work is well defined in three lists, employees can return to their previous focus, with existing reminders to help them transition back to normal
The Fourth List

Once enough projects have shaped up, start mapping them in a Framework Document by:

- Group/Team
- Function
- Or Customer

Keep it simple, using colors updates and project plans to capture details.

The upfront work makes performance measurement and reviews simple and objective.

Keep it fresh and available for important ad hoc updates to let’s say, INVESTORS!

One might say that once you have a Framework defined, it’s the first step in creating a strategy.
An easy way to get use to Creating Strategies

- One can think of a strategy as a story with:
  - A past
  - A present
  - A future
- Looping list will help define the past and present
  - Reoccurring and systematic failures of processes, work flows, and systems tend to repeat with clues, hints, and indicators
  - Having the ability to bucket and bundle related work helps to shape reality, but also help with determining the relative priority
  - Once you capture and assess the present, you can start visualizing the future
- The future is defined by a strategy and the ability to execute in order fulfill it
  - The tactical to strategic transitional planning can be the most difficult facet of management
  - The higher your position, the simpler the statement of goals and the harder to execute
Some Examples of Tools

- Don’t be afraid of formality in defining work for your team; most will likely appreciate it
  - See the sample of a “Department Task-Project-Initiative List” and try working on yours
- As the work is identified and captured, Start Creating your “Strategic Framework”
- If you lack confidence initially, privately create it and use it behind the scenes until you prove to yourself it’s helping
- **Stage 3** will focus almost exclusively on these tools and others to help organize emerging technology commercialization efforts and drive them forward
<table>
<thead>
<tr>
<th>Role</th>
<th>V.P. of Product Development</th>

</tbody>
</table>
**Role**
The Vice President of Marketing and Sales plans, directs, and sets the strategic direction of the sales and marketing program to maximize profit and increase product or service visibility. Direct the sales and marketing management staff in effective use and development of business plans and strategies. Works closely with V.P. of Product Development and V.P. of Operations to understanding the inherent technical and operational strengths of the company’s product offering.

**Scope**
- Complies and contributes to the Product Life Cycle process, ensuring technology, process, reliability, and regulatory roadmaps are understood and valid from a customer perspective.
- Analyze sales statistics to determine sales potential, monitor customer preferences and inventory requirements.
- Ensure services are in compliance with professional and company policy standards.
- Plan, direct, and set the strategic direction of the sales and marketing program to maximize profit and increase product or service visibility.
- Direct the sales and marketing management staff in effective use and development of business plans and strategies.
- Develops objectives and policies for the sales and marketing department.

**Tasks**
1. Task: Identify existing sales funnel’s contacts to date and make introductory calls
   a. Take opportunity to ensure that we have the correct contact information and all of the decision makers at the customer
   12/20/2016
2. Task: Develop Board Presentation on initial impressions of sales climate compared to your baseline experience
   a. Must contrast our competitors
   b. Must include initial impression on sales funnel maturation
   11/30/2016
3. Task: Meetings with the key company stakeholders:
   a. CTO
   b. V.P. of Ops
   c. V.P. of Product Development
   11/30/2016
4. Task: Review newly written Medical Device Product Requirement Document
   a. Meet with stakeholders to understand technology and operational basis
   b. Start to consider product and its value proposition
   c. Start to consider the Generic Buyer Profile
   11/20/2016

**Projects-Initiatives**
1. Project: Compose Marketing Requirement Document
   a. Working with CTO, V.P. of Product Development and V.P. of Operations
   12/30/2016
2. Project: Research and Make Recommendation on Cloud Based CRM System
   a. Write functional requirements specification, ensuring hooks for existing system integration and usage are considered
   b. Complete research and RFQ cycle
   c. Make recommendation
   1/30/2017
Closing Thoughts

- The system you use is not as important as conscientiously and dutifully using a system to capture, track, and prioritize validated work.

- Try out a method, get it working, and make it your own!
What’s Next?

Does your company need a basic foundation for success?

If so, The UMass Lowell Enlightened Bites Entrepreneurship Series presents the next two parts of this breakthrough series

December 1, Noon to 1 p.m. - Problems: Corner Them and Measure Them
December 8, Noon to 1 p.m. - Moving from Tactical to Strategic Planning
About Gary Ainsworth

My area of practice focuses on emerging technology product commercialization in hardware start-ups.

Also, I work with existing companies on new product introduction, operations, and product development performance improvement. In all instances I usually work in the gray area between R&D and Product Development -and- Operations and Supply Chain, employing methods to lower the inherent noise level allowing better decision making in a more accountable framework.

I'm currently working with UMASS Lowell's New Venture Business Development team and iHub on content around understanding start-up behaviors, leading to a higher probability of successful commercialization and profitability.

Additional Information
What are the origins of Three List Management

Time Design Systems in the 1990’s had a similar system which worked well, but didn’t link Time Management to Risk Management

Nor did it state that effective management of work content is a form of bottoms up strategic planning in the form of frameworks

Another management theory drove a concept of finishing what could be finished as soon as possible

Ainsworth discovered early that people are often and easily knocked out of productive work, and then they can not simply regain momentum

This is exacerbated when the individual is a manager, often causing entire teams to spin out of control or lose focus

My personal goal is to make sure that people in organization’s he manages understand their roles, goals, scope, and responsibilities to an 80% coverage level

20% is always changing and driven by event driven changes

Effective work content management de-stresses organizations, while increasing efficiency and quality of output

Well managed work content allows better and lower risk decision making

Event driven changes do not cancel previously validated work’s importance
